

Education system based on Augmented Reality and game programming

نظام تعليمي قائم على الواقع الافتراضي المعرّز وبرمجة الألعاب

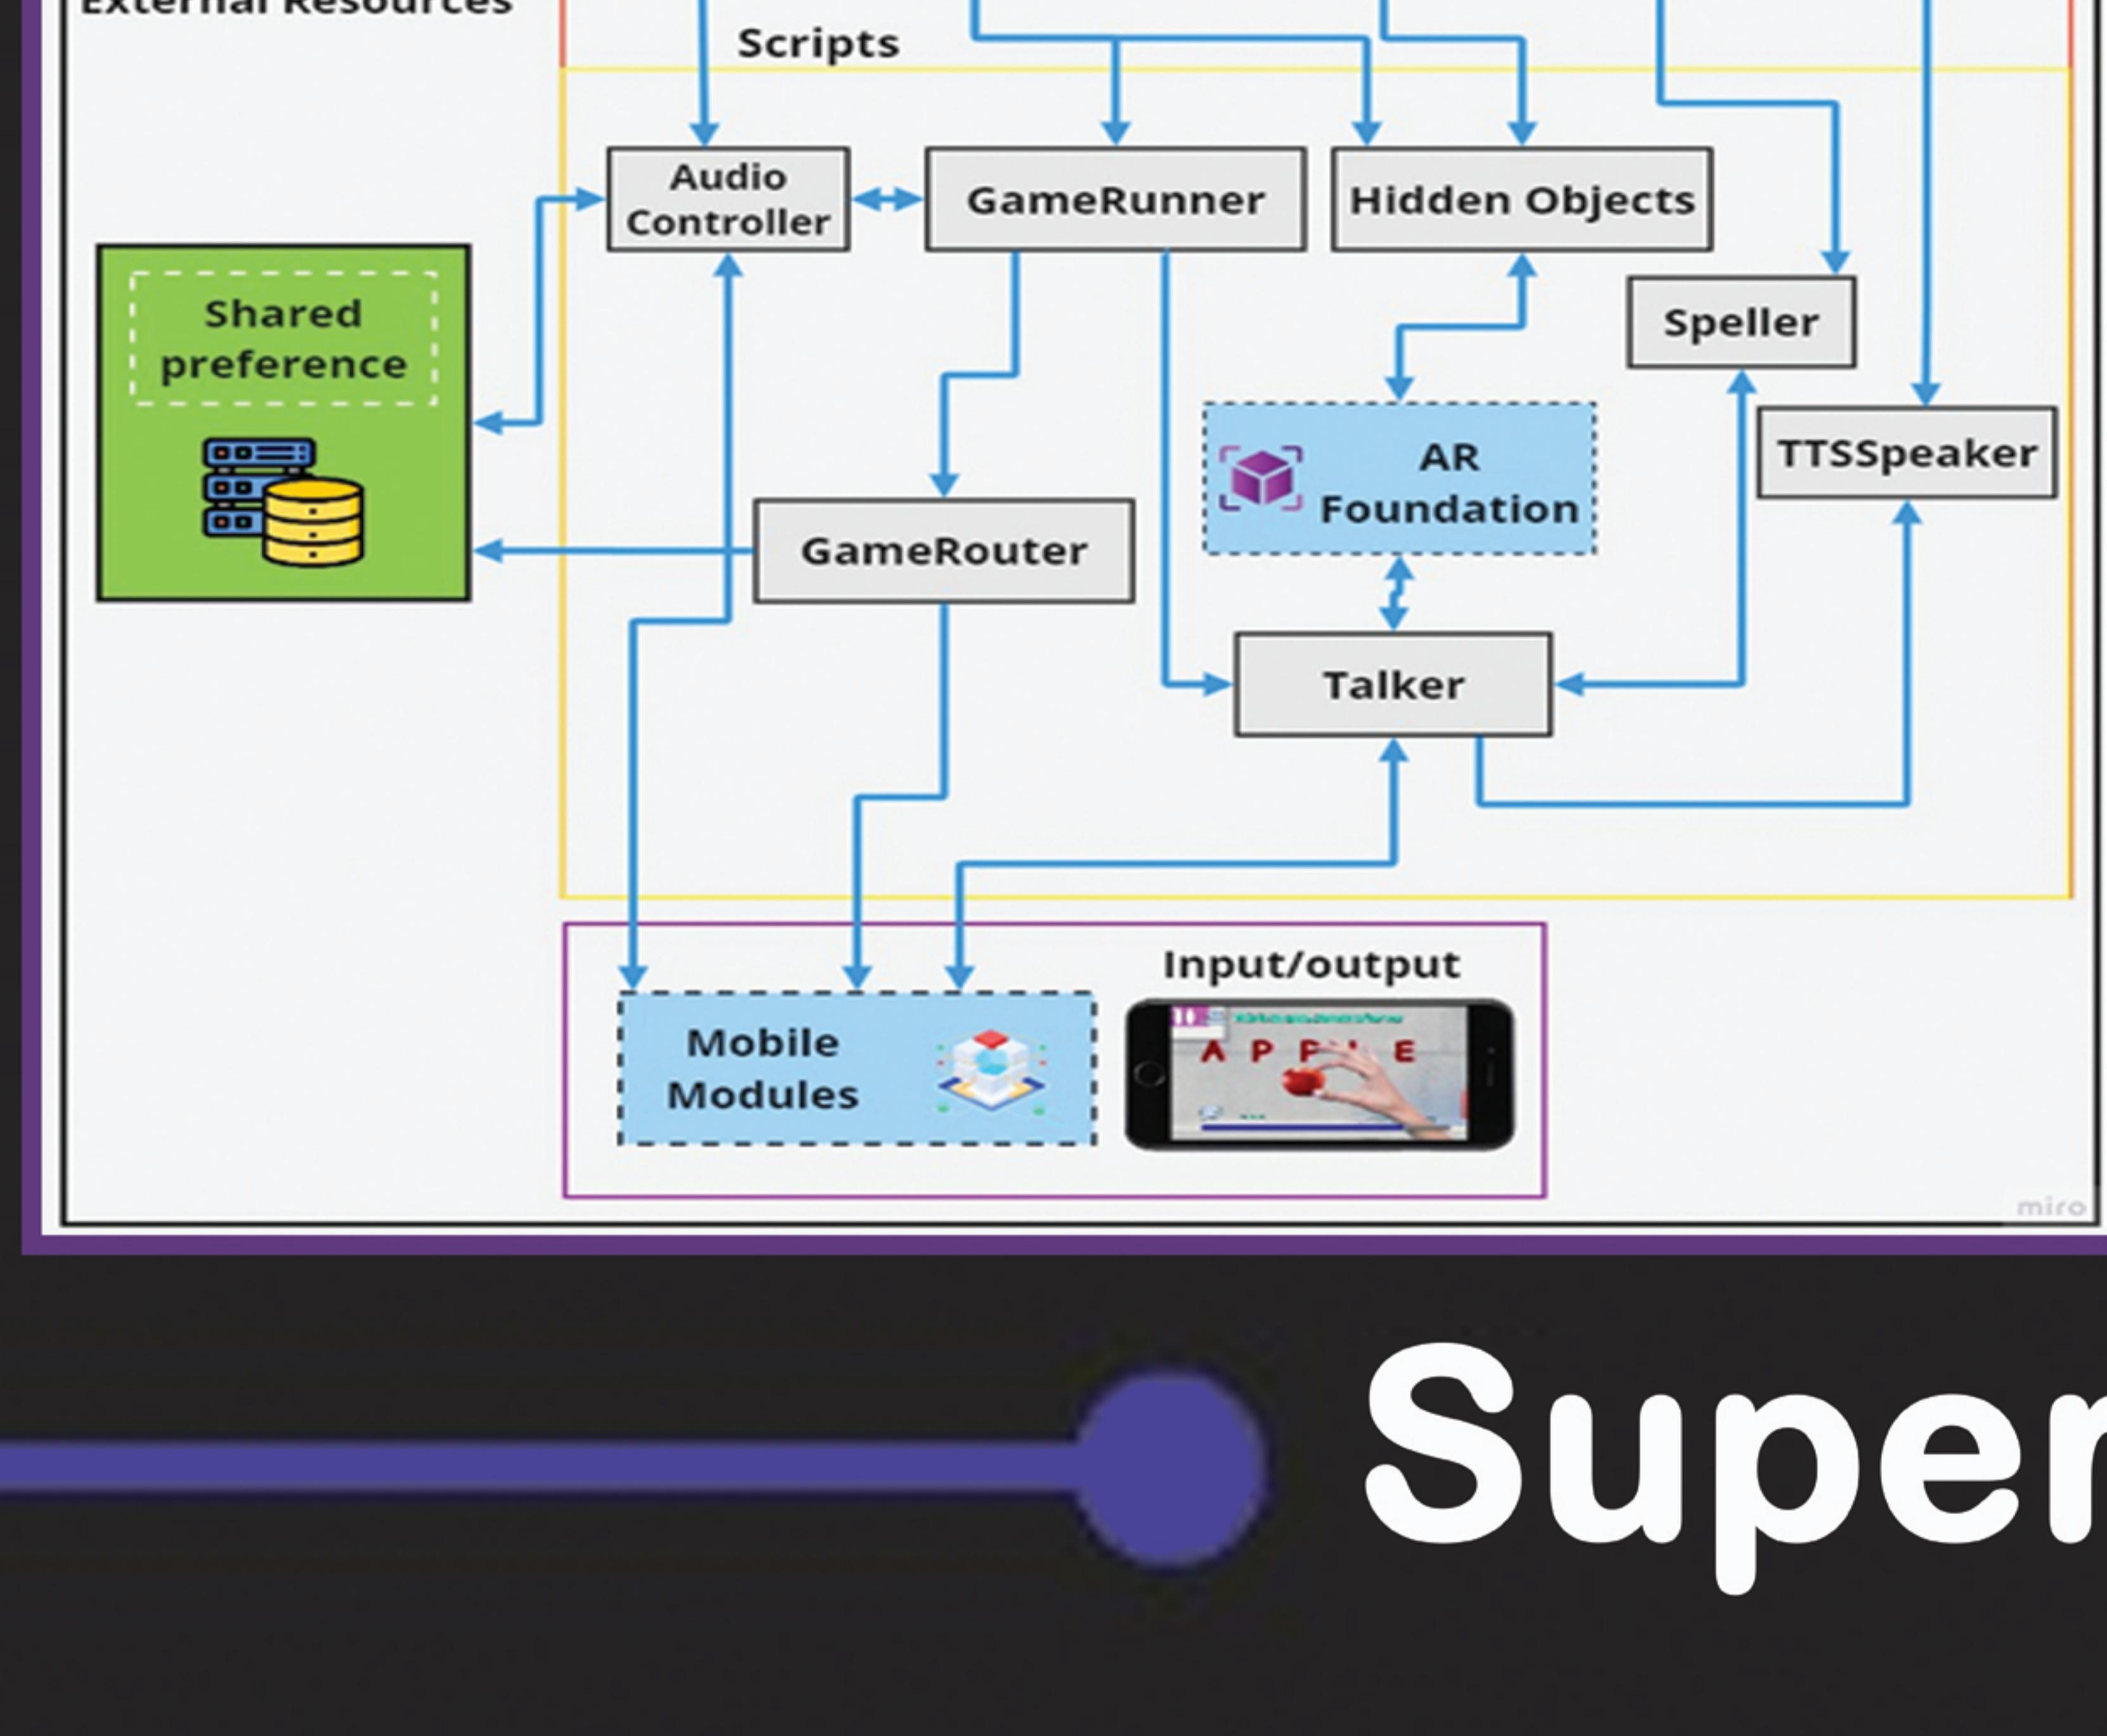

Abstract

We aim to achieve a new and enjoyable learning experience that leads the recipient to a high degree of benefit and enjoyment by using several modern technologies, such as augmented reality, in presenting 3D models and interacting with them. and text-to-speech to convert written text into audible speech that the user can hear that make the interaction more positive.
